DETAILED ACTION

Allowable Subject Matter

Claims 1-74 are allowed.

The following is an examiner's statement of reasons for allowance:

A method and apparatus for treating a heart comprising applying an electric field having a transport effect and having a non-excitatory electrical control effect, which does not induce a propagating action potential in the heart for controlling the activity of the heart as claimed are not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dev et al (US 2005/0192542 A1) disclose a method of electroporating a portion of the body of a patient to introduce molecules into tissues; however, there lacks a teaching or suggestion to apply an electric field that has a non-excitatory control effect and is independent of the transport effect, adapted to electrically control an activity of at least part of the heart.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Manuel whose telephone number is (571) 272-4952.
